

## Kick-off

Roles: Two teams are meeting each other and assigning roles.

- Producer: John
- Recorder: Istvan
- Review Leader: Petur
- Reviewers: Lubomir, Christoffer.

## Review meeting.

Start 9:10. End 9:55

### Functional requirements.

Missing user logins / registration?

3. Explain better

### Non-functional requirements

1. OK
2. OK
3. Specify # of users?
4. Specify how it should perform well? Response time, loading time, ??? Mobile and web belongs to Portability?
5. Specify manageable costs?
6. OK

**Admin user stories:** Specify roles better. Use customer/ car-owner / admin ?

1. There should only be one acceptance criteria. The current criterias are pre and post-conditions.
2. Wrong acceptance criteria. Current is a pre-condition. Should be: selected booking(s) confirmed.
3. The „user“ is unclear. This can be merged with user story #2. Pre-conditions mixed up with acceptance criteria.
4. Acceptance criteria is wrong. The result should be something like: „The car has been updated“.
5. Acceptance criteria is wrong. Should be: „The car has been deleted“

### Customer user stories.

1. Acceptance criteria is wrong, should be Car successfully booked, can see it in my Bookings, car is unavailable.
2. Missing acceptance criteria
3. Acceptance criteria is wrong. Should be, user successfully accepted his bookings.
4. What details need to be documented and how are they well documented?
5. Acceptance criteria is wrong. Incorrect => bookings are cancelled/deleted

#### **Use case name: List your car**

Pre-condition: incorrect, how can he have a car listed on the website if he's not registered?

Post-condition: Owner successfully *listed* (for rent) the car on the website.

Flow 3 & 4: can be merged into: User uploads car details.

Flow 8: Not understandable. Needs clarity.

Flow 9: Log-off not needed.

#### **Usecase name: rent your car**

The flow is not correlating to user stories.

Flow 4: why is #4 needed? What purpose does writing a message to the owner do?

Flow 5 & 6. Can be merged. From user stories it should be : „Customer requests booking“

Flow 7: Log-off is not needed.

Post condition is wrong: Car owner has to accept the booking request. Admin needs to verify payment details. Only after that is the car successfully booked.

Post condition could be: Customer has successfully requested a booking.
