

User Acceptance Test

Introduction

Coming to the Acceptance test we perform one of the last tests to evaluate our Web App and find out if the app meets expectations and requirements.

We performed this formal test with two group of people.

1. Internal (Alpha)
2. External

Requirements and Test Cases:

Functional requirements

1. Book car
2. All booking details
3. All pending booking details
4. All payment details
5. Cancel booking
6. Add car details
7. Confirm booking
8. Delete booking
9. Update car
10. Delete a car

Non-functional requirements

1. Testability: System should be fully tested
2. Usability : System should be easy to use - user friendly
3. Scalability : System should be able to adapt to increasing number of users
4. Performance : System should perform well in all mobile platforms and web browsers
5. Cost : Cost of production must be manageable
6. Security : System must be secured against all kind of threats.

Test Case no.1

Name: List the Car

Normal Flow:

- Open home.html
- Enter page - Log-in
